CMS Shear Safety Joint

The CMS Shear Safety Joint provides a means of releasing the tubing string from the rest of the completion in an emergency. A straight pull separates the tool at a predetermined shear value. The CMS Shear Safety Joint allows torque to be transmitted through the tool without affecting the shear screws.

Features and Benefits

- Available in premium materials
- Available with premium thread connections
- The shear value is field adjustable
- Allows the application of torque without affecting the shear screws
- Additional sizes available on request
